addition, in order to provide a more effective learning environment, additional factors related to personalization (e.g. prior knowledge, learning context, online learning behavior, etc.) need to be taken into account.

Further improvements of the m-learning system may include introduction of location-based services and SCORM standards for organization and transfer of learning materials. In the near future, better mobile devices (primarily smart phones and tablets) and cheaper and faster data transfer via Wi-Fi will enable the use of more interactive and multimedia learning materials. In addition, a deeper analysis of students’ perceptions of specific details of m-learning may be performed.
